PROFESSIONAL SUMMARY

Senior Backend Engineer with 5 years designing, building, and scaling REST APIs and backend systems using PHP, Laravel, and Node.js. Skilled in system design, software architecture, and database optimization — improved API performance via Redis caching and query optimization, secured systems with JWT/OAuth2, and integrated 10+ third-party services (payments, SMS, logistics). Led code review, release management, and mentoring for a backend team in an Agile, Git-based environment.

TECHNICAL SKILLS

Backend & Core: PHP, Laravel, MVC, OOP, REST API Design, Microservices, Database Design & Optimization

Databases & Caching: MySQL, Redis, MongoDB

Authentication & Security: JWT, OAuth2

Secondary / Full-Stack: Node.js, Express.js, React.js, JavaScript, GraphQL

Cloud, DevOps & Tools: AWS, CI/CD, Git, GitHub, Linux, Nginx, Swagger, Postman, Unit Testing, Agile

Architecture & Design: System Design, Software Architecture, Service-Oriented Architecture, SOLID Principles, Scalable API Design

Process & Leadership: Code Review, Release Management, Team Leadership, Mentoring, Agile/Scrum, Async Collaboration

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Tech Exactly

Dec 2024 – Jun 2026

- Architected the backend for web and mobile platforms using Laravel and Node.js, replacing a legacy monolith with a scalable, service-based (microservices) architecture.
- Reduced API response times by 30% by introducing Redis caching and rewriting slow MySQL queries — the leading driver of latency complaints prior to the change.
- Built and hardened production REST APIs with JWT-based authentication, closing security gaps flagged in prior audits.
- Led code review and deployment process for the backend engineering team, setting release standards that improved consistency and reduced post-deploy defects.

Backend Developer — Webart Technology Pvt. Ltd.

Feb 2023 – Dec 2024

- Delivered enterprise-grade Laravel applications and REST APIs for external business clients, from requirements gathering through production support.
- Implemented 10+ third-party integrations — payment gateways, SMS providers, logistics APIs — each with independent authentication, retry logic, and error handling.
- Improved SQL query performance by 40% through targeted indexing and query rewrites on high-traffic MySQL tables.
- Designed a reusable service-layer architecture following SOLID principles, reducing duplicate code across multiple client projects.

Junior Backend Developer — Fusion Techlab

Jun 2021 – Feb 2023

- Built backend modules and REST APIs in PHP/Laravel, and designed relational database schemas for internal tools from scratch.
- Supported AWS deployment and production maintenance, gaining early hands-on ownership of live infrastructure.

PROJECTS

iDrive — Vehicle Rental & Mobility Platform

Laravel, MySQL, Redis, JWT

- Designed and built REST APIs for booking, payment, and inventory management, forming the core transactional backbone of the platform.
- Implemented Redis caching and JWT-based authentication to keep the application responsive and secure under concurrent booking load.

Loyalty Magnet — Multi-Tenant Rewards Platform

Laravel, MySQL, OAuth2

- Designed a multi-tenant backend architecture serving multiple client brands with isolated data and configuration from a single deployment.
- Built loyalty management REST APIs secured with JWT/OAuth2, preventing cross-tenant data exposure.

EDUCATION

B.Tech in Electronics & Communication Engineering — Techno India Banipur, Kolkata (2014)

CERTIFICATIONS

Node.js: The Complete Guide — Udemy, May 2025
